Big data is a term used to refer to data sets that are too large or complex for traditional data-processing application software to adequately deal with. Data with many cases (rows) offer greater statistical power, while data with higher complexity (more attributes or columns) may lead to a higher false discovery rate. Big data challenges include capturing data, data storage, data analysis ...

How Data Visualization is the Future of Information Sharing

Information visualization or information visualisation is the study of (interactive) visual representations of abstract data to reinforce human cognition. The abstract data include both numerical and non-numerical data, such as text and geographic information. However, information visualization differs from scientific visualization: "itâ€™s infovis [information visualization] when the spatial ...

Welcome to Dear Data Two This project was inspired by Dear-Data.com, a wonderful collaboration between Giorgia Lupi and Stefanie Posavec. We (Jeffrey Shaffer and Andy Kriebel) decided to follow in their footsteps and coincidentally, Andy moved from California to London, England. It is our intention to follow the original authors, week by week, creating our own visualizations on postcards, and ...

Network Analysis and visualization appears to be an interesting tool to give the researcher the ability to see its data from a new angle. Because Gephi is an easy access and powerful network analysis tool, we propose a tutorial designed to allow everyone to make his first experiments on two complementary datasets.

In this step-by-step Seaborn tutorial, you'll learn how to use one of Python's most convenient libraries for data visualization. For those who've tinkered with Matplotlib before, you may have wondered, "why does it take me 10 lines of code just to make a decent-looking histogram?" Well, if you're looking for a simpler way to plot attractive charts, then [!]
