UNDERSTANDING NONLINEAR LOADS AND GENERATOR SET INTERACTION

Nonlinear optics (NLO) is the branch of optics that describes the behaviour of light in nonlinear media, that is, media in which the polarization density P responds non-linearly to the electric field E of the light. The non-linearity is typically observed only at very high light intensities (values of atomic electric fields, typically 10^8 V/m) such as those provided by lasers.

Nonlinear optics - Wikipedia

A pulse generator is either an electronic circuit or a piece of electronic test equipment used to generate rectangular pulses. Pulse generators are used primarily for working with digital circuits, related function generators are used primarily for analog circuits

Pulse generator - Wikipedia

American Journal of Physics and Applications (AJPA) provides a forum for the publication of scientific research and review articles. The journal publishes original research papers devoted to wide range of areas of physics and its applications. The topics included in this journal emphasize understanding of the physics underlying modern technology.
