Diffusion Processes: Experiment, Theory, Simulations

The articles in this book reflect the omnipresence of diffusion processes in the natural sciences. They describe experimental results as well as theoretical models and computer simulations, and addres ...

Diffusion Processes: Experiment, Theory, Simulations

Diffusion of Innovations Theory Diffusion of innovations is a theory profound by Everett Rogers that seeks to explain how, why, and at what rate new ideas and technology spread. Rogers argues that diffusion is the process by which an innovation is communicated over time among the

Thus, diffusion should not be confused with convection or dispersion, which are other transport mechanisms that use bulk motion to move particles from one place to another. 2. Gedanken Experiment Paul Bergâ€™s book â€œRandom Walks in Biologyâ€• (1), describes a useful thought experiment that illustrates the diffusion phenomenon.

diffusion over time. A plot of conductivity against time will allow for the determination of the liquid diffusivity. Figure 2.1: Liquid Diffusion Coefficient Apparatus The concentration at the chosen lower ends is taken to be constant while the concentration at top end is effectively zero during experiment.

EDITORIAL Open Access Diffusion and association processes in biological systems: theory, computation and experiment Paolo Mereghetti^{1,2}, Daria Kokh¹, J Andrew McCammon³, Rebecca C Wade^{1*} Abstract Macromolecular diffusion plays a fundamental role in biological processes.

Diffusion and association processes in biological systems

Diffusion of Innovations seeks to explain how innovations are taken up in a population. An innovation is an idea, behaviour, or object that is perceived as new by its audience. Diffusion of Innovations offers three valuable insights into the process of social change: - What qualities make an innovation spread successfully.

Experiment: Two apparatus for measuring comparative rates of diffusion through gas and liquid are set up (Figure 2). Tube 1 is filled with a 2% agar-sol containing 1 ml of methyl red indicator and 1 drop of 0.1 N

NaOH (in alkaline medium methyl red is yellow and in acidic medium red).
