Feature scaling is a method used to standardize the range of independent variables or features of data. In data processing, it is also known as data normalization and is generally performed during the data preprocessing step.

A simple and surprisingly effective family of conditioning mechanisms. Visual question-answering +. Perez et al. use FiLM layers to build a visual reasoning model trained on the CLEVR dataset to answer multi-step, compositional questions about synthetic images. The linguistic pipeline acts as the FiLM generator. FiLM layers in each residual block modulate the visual pipeline.

Deep learning (also known as deep structured learning or hierarchical learning) is part of a broader family of machine learning methods based on learning data representations, as opposed to task-specific algorithms. Learning can be supervised, semi-supervised or unsupervised. Deep learning architectures such as deep neural networks, deep belief networks and recurrent neural networks have been ...

Main Conference Program Guide. PDF: (link)Word: (link)At-a-Glance Summary: (link)Acceptance Statistics. This year, we received a record 2680 valid submissions to the main conference, of which 2620 were fully reviewed (the others were either administratively rejected for technical or ethical reasons or withdrawn before review).

### **CVPR2017**

Welcome! For the first time, the program page will allow conference attendees to choose the sessions (and individual papers and posters) they want to attend and generate a PDF of their customized schedule!. This page should work on modern browsers on all operating systems (Internet Explorer <= v10 will likely not work).
