Ecology (from Greek: *oikos*, "house", or "environment"; *-logia*, "study of") is the branch of biology which studies the interactions among organisms and their environment. Objects of study include interactions of organisms with each other and with abiotic components of their environment. Topics of interest include the biodiversity, distribution, biomass, and populations of organisms ...

Species distribution is the manner in which a biological taxon is spatially arranged. The geographic limits of a particular taxon's distribution is its range, often represented as shaded areas on a map. Patterns of distribution change depending the scale at which they are viewed, from the arrangement of individuals within a small family unit, to patterns within a population, or the distribution ...

Malaria is caused by a protozoan belonging to the genus *Plasmodium*. Although there are over 400 species, four routinely cause disease in humans: *Plasmodium falciparum*, *P. vivax*, *P. ovale*, and *P. malariae*. While they all belong to the same genus, each species behaves quite differently in most aspects of their biology within the human and mosquito host.
