A streak camera is an instrument for measuring the variation in a pulse of light's intensity with time. They are used to measure the pulse duration of some ultrafast laser systems and for applications such as time-resolved spectroscopy and LIDAR

### **Streak camera - Wikipedia**

Streak camera technology is for measuring ultra-fast and optically weak phenomena. The function of streak cameras is to measure the behaviour of single photons over time, and physical phenomena can be deduced on the basis of the results obtained.

Multiferroics are defined as materials that exhibit more than one of the primary ferroic properties: . ferromagnetismâ€”a magnetisation that is switchable by an applied magnetic field,; ferroelectricityâ€”an electric polarisation that is switchable by an applied electric field, and; ferroelasticityâ€”a deformation that is switchable by an applied stress,; in the same phase.

### **Multiferroics - Wikipedia**

1. Introduction. Physics is an experimental science, and as such the experimental basis for any physical theory is extremely important. The relationship between theory and experiments in modern science is a multi-edged sword:
