Pulmonary Vein Recordings A Practical Guide To The Mapping

This is a concise, practical guide to understanding pulmonary vein recordings in radiofrequency catheter ablation for atrial fibrillation. Purpose The purpose is to provide an advanced understanding of atrial fibrillation, catheter-based mapping, and ablative therapy through annotated pulmonary vein recordings.

veins than in the right superior pulmonary vein, whereas the pulmonary vein potentials in the superior pulmonary veins were larger than in the left inferior pulmonary vein. The atrial and pulmonary vein potentials usually were readily distinguished during sinus rhythm in the right superior pulmonary vein.

Spiking indicates electrical activity as the action potential propagates through the recording catheter. Since the pulmonary vein is not a perfect cylinder, not all electrodes make a good contact.

*RA/SVC signal tends to be lower in amplitude and occurs within the initial 30ms of the surface P wave. This is followed by a brief isoelectric interval (20-50ms) due to delayed conduction across the interatrial septum.
