A SEISMIC COMPARISON OF RC SPECIAL MOMENT RESISTING FRAME

Reflection seismology (or seismic reflection) is a method of exploration geophysics that uses the principles of seismology to estimate the properties of the Earth's subsurface from reflected seismic waves. The method requires a controlled seismic source of energy, such as dynamite or Tovex blast, a specialized air gun or a seismic vibrator, commonly known by the trademark name Vibroseis.

Even though it has never been validated by objective testing, Probabilistic Seismic Hazard Analysis (PSHA) has been widely used for almost 50 years by governments and industry in applications with lives and property hanging in the balance, such as deciding safety criteria for nuclear power plants, making official national hazard maps, developing building code requirements, and determining ...

60 2014 | The ASCE 7 standard Minimum Design Loads for Buildings and Other Structures is the document that the International Building Code (IBC) relies on for its structural provisions. ASCE 7-05, the standard referenced in the 2006 and 2009 editions of the IBC, did not undergo the recently usual three-year update.
